## Summary

---

Senior Software Engineer with 7 years of experience in full-stack dev and AI workflows (Kuaishou, Meituan, AtriaAI). **Currently based in Singapore and seeking full-time opportunities requiring EP sponsorship.**

## Skills

---

**Languages:** JavaScript, TypeScript, Python

**Frameworks:** ReactJS, VueJS, Next.js, Node.js, Monorepo

**Libraries:** Redux, Zustand, Vuex, AntDesign, AntV, Jest, Cypress, TailwindCSS

**Engineering & Dev Tools:** Cursor, Claude, Git, Charles, Postman, LightHouse, NPM, Yarn, Figma, Framer, Husky, GitHub Actions

**AI & SaaS:** OpenAI API, Replicate, Stripe, Prisma, PostgreSQL, NextAuth

## Experience

---

**AtriaAI** - AI-powered creative ad workflow platform.

**Mar 2025 - May 2026**

*Software Engineer*

*Remote*

- Led end-to-end AI image generation workflows to improve creative reuse and reduce ad-production friction for marketers through multi-style generation, prompt/model evaluation, and scalable async workflows
- Designed and launched an AI-powered creative screening pipeline leveraging LLM Vision, auto-tagging, and semantic retrieval to accelerate template curation and reduce manual review overhead
- Built cross-platform Chrome extension experiences across TikTok, Instagram, and Meta Ad Library, enabling one-click ad saving and improving platform code reuse by **~60%**
- Designed and shipped a 0→1 internal Admin Dashboard in **one week** by leveraging **Claude Code Skills** to auto-generate page scaffolding from API definitions, covering **120+ APIs** and eliminating the ops team's reliance on manual workflows and direct database access; established reusable patterns enabling teammates to ship new admin pages independently
- Rebuilt the marketing website and growth infrastructure with a focus on SEO, conversion, and performance optimization, improving CTR by **30%** and Core Web Vitals by **50%**
- Independently owned CI/CD, observability, Docker workflows, staging environments, and engineering standardization to support reliable production delivery

**SnapStory AI**

**Jun 2024 – Feb 2025**

*Independent Full-Stack AI SaaS Project*

*Remote*

- Built and launched an AI storytelling SaaS platform enabling users to generate comics and short videos from text or image input across **12+** artistic styles with bilingual (EN/ZH) support
- Designed AI creation workflows focused on reducing creative friction through parallel multi-style generation, reusable prompt templates, and async video generation experiences
- Architected scalable AI infrastructure using OpenAI and Replicate APIs, including concurrent generation pipelines, async queue management, real-time status tracking, and persistent generation history
- Developed a credit-based monetization system with Stripe payments, subscription lifecycle handling, and real-time credit synchronization to support self-serve onboarding and conversion

- Built community-driven prompt library features including sharing, forking, likes, and discovery mechanisms to improve prompt reuse and user engagement history
- Independently owned product design, full-stack engineering, database architecture, deployment, internationalization, and production operations as a solo developer

## Kuaishou Technology

Sep 2020 - May 2024

Frontend Developer

Beijing, China

- Led a 4-person frontend team using React and Redux to develop an enterprise integration platform, streamlining data processing workflows and improving operational efficiency by **50%**
- Led the refactoring of a monolithic approval center using layered architecture, unifying APIs across web and mobile platforms to improve maintainability and scalability
- Improved approval efficiency by **63%** through IM integration, custom approval workflows, and external system connectivity using Node.js
- Built a real-time project monitoring and alerting dashboard that reduced critical issue resolution time by **20%** and improved project quality management
- Standardized Git workflows and optimized CI/CD pipelines, improving deployment efficiency by **10%**
- Developed interactive H5 campaign experiences using Vue and Lottie, collaborating with multiple cross-functional teams to deliver within tight timelines

## Meituan

Apr 2019 - Sep 2020

Frontend Developer

Beijing, China

- Developed a self-service merchant feature using Vue.js that reduced service turnaround time from 2 days to 10 minutes and generated **¥6.6M** in revenue
- Contributed to the redesign of the merchant-side system v3.0, improving order management workflows for over **300,000+** active merchants
- Optimized homepage performance through lazy loading and tree shaking, reducing JavaScript size by **37%** and CSS by **66%**, improving Time to Interactive by **200ms**
- Implemented automated testing using Jest and Cypress, reducing production abnormality rates by **60%** and increasing unit test coverage by **10%**
- Built a network diagnostic tool using Node.js and JavaScript to detect connectivity issues and compromised resources, improving overall system reliability

## Education

Telecommunications Science and Technology Research  
Institute

Sep 2016 - Apr 2019

Beijing, China

Master of Information and Communication Engineering

Xidian University

Sep 2012 - Jun 2016

Bachelor of Communication Engineering

Shaanxi, China
